No changes to my schema

"waterfall" is on two albums. It is in the nature album and the waterfalls album.
"creek" is only on the nature album as it is not a waterfall

For my color scheme I went with a subdued color pallet. The black and creme provide a nice contrast and the lavender accents the page with some color without distracting from the content. All of the pages are accessible from the nav bar and the login/logout tab changes depending on the session value.

The user needs to be logged in to do anything to the page. This includes adding a photo or album as well as making any changes. All of the possible changes can be accessed on the photo_detail page. Additionally the album name can be changed in the album view section.

I turned M2 in Friday night but it still is not graded at this time Tuesday @ 12 so I was not able to implement any of the changes as I have not received them yet. I toned down the initial colors as mentioned in M1.
